

AI Governance Statement

PUR
POS
E

High-level public commitment to ethical AI usage by Dëkkal.

Our Commitment

Dëkkal is committed to developing and deploying artificial intelligence that is transparent, accountable, and fair. Our flood risk scoring system is designed to support — not replace — human judgment in insurance underwriting decisions.

Principle 1 — Geophysical Data Only

Our AI model uses exclusively satellite imagery, terrain elevation, rainfall statistics, soil properties, and drainage network data. No personal, demographic, income, or identity data is collected, stored, or processed at any stage.

Principle 2 — Human-in-the-Loop

All scores above 75/100 require mandatory human review before any underwriting decision. No automated approval or denial of insurance coverage is permitted.

Principle 3 — Explainability by Design

Every risk score is accompanied by a minimum of three ranked explanatory factors. No opaque score is ever delivered. Insurers can request a full feature attribution report for any individual score.

Principle 4 — Data Sovereignty

All data is hosted at Sénégal Numérique SA — an ISO 27001 certified sovereign datacenter in Diamniadio, Senegal. No data transfer outside West Africa without explicit contractual consent.

Principle 5 — Continuous Accountability

The model is recalibrated quarterly. Bias audits are conducted every quarter. An external audit is conducted annually. All audit results are available to clients upon request.

Responsible Officers

Role	Name	Scope
CTO — Responsible Officer for Model Outputs	Babacar Ndao	Score accuracy, bias monitoring, recalibration, incident response
CEO — Overall AI Governance Accountability	Aminata Sall	Regulatory compliance, ethics, CIMA alignment

Regulatory Alignment

- ARISE Framework — Pillars 4 (Data Sovereignty) and 6 (Ethical Governance)
- Ghana National AI Strategy

- CIMA Zone insurance regulatory standards
- Senegalese Data Protection Law (Law 2008-12)
- GDPR data processing principles
