

Acceptable Use Policy

**PUR
POS
E**

Rules governing interaction with Dëkkal AI features. Binding on all insurer clients and partners.

1. Permitted Uses

Dëkkal's flood risk scoring API may be used exclusively for:

- Underwriting support for IARD (property & casualty) insurance policies
- Portfolio flood exposure analysis by licensed insurers
- Risk-based pricing research and actuarial modeling
- Regulatory reporting of flood exposure by financial institutions
- Academic and non-commercial climate risk research (with written approval)

2. Prohibited Uses

2.1 Discriminatory Use

Using Dëkkal scores to deny insurance coverage based on neighborhood reputation, perceived income level, or any factor unrelated to the physical flood risk of a specific address.

2.2 Automated Decision-Making

Using Dëkkal scores as the sole basis for automated approval or denial of insurance policies without human review — particularly for scores above 55/100.

2.3 Data Resale

Reselling, licensing, or redistributing Dëkkal risk scores or address data to third parties without written authorization from Dëkkal.

2.4 Military or Security Use

Using flood risk or drainage data for military intelligence, population surveillance, or security profiling.

2.5 Reverse Engineering

Attempting to reconstruct Dëkkal's model, training data, or proprietary algorithms through systematic API queries or other means.

3. Insurer Responsibilities

Insurers using Dëkkal's API agree to:

- Treat Dëkkal scores as decision support — not as binding determinations
- Apply mandatory human review for all scores above 75/100
- Document decisions to deny coverage that reference Dëkkal scores
- Report confirmed flood events on scored addresses via POST /api/v1/feedback
- Not share access credentials with third parties

4. Dëkkal's Responsibilities

Dëkkal commits to:

- Maintaining API uptime of 99.5% during the rainy season (June to October)
- Providing a confidence score and data completeness flag on every response
- Notifying clients of model updates at least 14 days in advance
- Responding to data quality complaints within 48 hours

5. Enforcement

Violations of this policy may result in immediate suspension of API access, termination of the service agreement, or legal action for damages where applicable.
